Lloydminster Southwest Area Structure Plan

Map 6: Future Sanitary Sewer (Concept 2)

This map presents an alternative option for sanitary sewer infrastructure within the plan area, which is also detailed in the Sanitary Sewer Master Plan (2024). Concept Two (2) routes the peak wet weather flow (WWF) from the quarter section adjacent to Parkview Estates southward, connecting to the proposed infrastructure for the parcels south of 12 Street. This concept may require fewer upgrades to the existing system but is dependent on the installation of a new South Trunk, which would run from the Wastewater Treatment Facility, along the east of the City, to the southern portion of the plan area.
