Lloydminster Southwest Area Structure Plan

Map 7: Future Stormwater Sewer Infrastructure

This map outlines the planned stormwater sewer system, as outlined in the City of Lloydminster Stormwater Master Plan (2024). It includes proposed pipes and stormwater management facilities (SWMF) that handle rainwater runoff from streets, roofs, and other surfaces within the municipality. The SWMF identified in this map are not to scale, and their exact size and nature will be determined in future detailed plans, such as Neighbourhood Structure Plans (NSPs).
